

FRANCE - DENMARK

APRIL, 2024

MUNICH, GERMANY, May 9TH - 12TH, 2024 - Two of the leading and respected audio pioneers have joined forces to showcase the most advanced and high-performing immersive home theater demo ever presented at the High End in Munich.

Attendees at the High End exhibition will have the opportunity to experience an unprecedented acoustic level of immersive audio that combines the intelligence of Trinnov's new groundbreaking WaveForming technology and a Perlisten's THX Certified Dominus surround system, consisting of an exciting 11.1.6 channel system. To perform Trinnov's Waveforming technology, the system is powered with no less than 8 pcs. D15s Perlisten 15" active subwoofers.

"According to Arnaud Destinay, Trinnov's Director of Sales, the special custom-built home theater room demonstrates how our advanced technology completely redefines low-frequency reproduction in home cinemas and beyond. The WaveForming is one of the latest innovations from Trinnov and presenting this on a full scale THX Certified Dominus system by Perlisten will only enhance the complete experience."

"The home theater we are showcasing at High End 2024, combines the capacity of two audio "Titans" and we are proud to initiate this new partnership with Trinnov. The home theater system is designed to deliver a mind-blowing sound experience that will set a new standard for audiophiles, custom integrators, and their clients, said Lars Johansen, Perlisten Chief Sales Officer."

Experience this exciting space in the special made 18 seats cinema in Atrium 3.1, room C112. Entrance by appointment only.

About Trinnov:

Trinnov Audio has been an industry pioneer pushing the boundaries of audio processing technology for over 20 years. Grounded in an unwavering commitment to research in high spatial resolution audio, Trinnov has earned a reputation for developing advanced, industry-defining sound processing technologies including proprietary state-of-the-art loudspeaker/room optimization, exclusive four-element 3D mapping technology, and a groundbreaking advancement, WaveForming™ Technology.

The company has been awarded over 50 international patents and collected countless industry awards and accolades reflecting the company's leadership in translating scientific discoveries into practical audio solutions. Trinnov products can be found in over 12,500 high-performance installations worldwide spanning across the professional, high-end, and commercial audio markets.
